

## **Summer Camp Benefit Program Automation**

New York, NY

---

### ***Client***

**1199 National Benefit Fund**

### ***Problem***

The National Benefit Fund (NBF) had an ongoing program to send children of NBF members to summer camp as an employee benefit. The program had grown over the years to the point where they were sending 500 to 600 children to camp annually. NBF needed to manage processes such as determining eligibility, interviewing, scheduling, budgeting, and slotting children in one of 30 available camps.

NBF's previous method of administering the camp program was a paper method of recording and filing each individual child's information. This resulted in much inefficiency, including not being able to gauge budgets in real time.

### ***Scope***

Warshaw Group assisted NBF in automating their camp program with the following enhancements:

- Performed business process analysis to develop automated case management processes for scheduling and determination of child eligibility
- Implemented Mobile Validity® data collection technology for computerized questionnaire development and deployment
- Implemented a Mobile Validity® Communication/Notification system for automated correspondence
- Developed a budget component for automatic budget assessment
- Performed data conversion and consolidation of pre-existing data
- Implemented both mobile and PC platforms for data collection

### ***Solution/Benefits***

The Warshaw Group solution allowed for the automation of the NBF summer camp program. This solution resulted in time and cost savings and greater accuracy in placing children in camps.

The system also allowed NBF to be able to efficiently track their camp budget every year and determine budgets in real-time. NBF's system resulted in more accurate information being collected, fewer errors, and higher satisfaction for both NBF workers and program members.
